Create Something Special!

LASER IS AN ACRONYM FOR:

*L*ight
*A*mplification by
*S*timulated
*E*mission of
*R*adiation

This acronym is a technical description of how the laser machine operates. The machine converts a beam of light into heat which burns the design into the product. This process is much like using a magnifying glass and sunlight to start a fire in a dried pile of leaves, except only under a very controlled and precise environment. Under these circumstances, we are able to create something special, beautiful, and meaningful for you and the people in your life.
